ANNUAL SUBJECT INDEX

Vol. 10 no. 6 1994
Pages 695–697

4-D microscopy
digital imaging 443
ADAM
algorithm, informational sequences 3
ADVANCE
algorithm, analysis of informational sequences 3
Aggregation
cellular interaction, CPL 645
AIDS
Automat, program to search for DNA similarity 153
Algorithm
analysis of nucleotide sequence for VAX and SUN computers 67
Aligned protein
improved interpretation of nucleic acid sequence 111
Alignment
database, AIX, SunOS, VAX/VMS 277
Alu-free decamers
transcription factor signals 501
Amino acid residues
sequence analysis, conformational pattern distribution maps 163
Amino acid sequence
estimation of evolutionary distances, phylogenetic inference 189
AMR
method of sizing classification trees 263
ANSI C
computer language application 35
Archiving system
cell lineage tracing, retrospective embryology 443
Artificial life
field-directed development 85
Automat
DNA similarity program 153
Bacteriology
bacterial identification program 329
BIOESTIM
estimation in bioprocess engineering 477
Biological sequence database
FarFetch 207
BLAST
searching tool 457
Blixem
sequence analysis 301
Brookhaven
protein data bank 551
BUILD
processing of multiple data files 145
cDNA
DiffScreen, library gene isolation 209
Cell
antidromic action software 237
Classification
sizing species trees 263
Clone ordering
genome library 623
Contig assembly
DNA mapping algorithm 309
COSMAP
circular restriction map construction 449
Coupled binding reactions
equilibrium state prediction 471
CPL
behaviour, intercellular aggregation 645
Data bank
protein, Brookhaven 551
Databank searching
reduced amino acid alphabet 453
Database
DNA, protein alignment 277
wide area networks 519
Decanucleotides
identification, homology searching 465
Developmental biology
cellular interaction modelling, CPL 645
DiffScreen
rapid analysis of hybridization cDNA 209
DNA
alignment similarity searches 277
application to AIDS 153
base pair modelling 61
fragment size determination 185
identification of sequence regions 219
phylogeny, multiple sequence alignment 243
sequence analysis program 11
DNA fragments
contig construction 401
size estimation 675
DNA mapping
algorithm based on interval graph representation 309
Electrophoresis
protein molecular weight 133
Enzyme
statistics, accurate estimates of confidence limits 273
EXCEL
determination of protein structural characteristics 495
FarFetch
sequence entry server accessible via the Internet 207
FastDNAml
constructing phylogenetic trees from DNA sequences 41
Folding structure
cytochrome P450, cytochrome *C* oxidase, subunit II 7
RNA sequences alignment 389
Fragment assembly
DNA sequence fragment, GenFrag 2.1 567
GAPIII
gene modelling 613 **GEL**
fragment size determination program using mobility on agarose gel 185
Gel electrophoresis
Quest II, 2-D gel protein database 137
restriction mapping programs, performance 249
Gel exclusion chromatography
protein molecular weight 133
Gene identification
intelligent computing 199
Gene modelling
from accurately predicted exons 613
Genetic markers
quantitative trait loci estimation 513
GenFrag 2.1
DNA sequence fragment assembly 567
Genome analysis
intelligent computing 199
sequence analysis tool 547
tool for aligned short protein block searches 79
Genome sequencing
large scale sequence analysis 301
Globular proteins
α-helix, β-strand segment prediction 659
GOR
protein secondary structure prediction 341
GRAM
restriction mapping using single-digest restriction fragments 349
Graphic user interface
user expandable program 669
Group sequence alignment
group to group, computational acceleration 379
GUI
multiple sequence analysis, graphic user interface 669
HASSLE
remote access tool 31
HIV/AIDS
disease stage estimation 679

© Oxford University Press

Homology
nucleic acid sequence, protein, search algorithm database 319
HRVUAB
heart rate variability program 559
Identification tool
a teaching program, numerical identification procedures 329
InfoTrac
transcription factor database, increased accessibility 323
Intelligent computing
protein and RNA structure prediction 199
Internet
sequence analysis tool, genome 547
Julia set model
algorithm for understanding developmental biology 85
Macintosh
tool for genome analysis and cDNA sequencing 171
Macromolecules
C++ class library, PDBlib 575
MacStAn
Macintosh program, random nucleic acid sequences 49
Mapping
single-digest restriction fragments, GRAM, genFragll 349
Marine phytoplankton
identification, RBF, MLP 285
MC-Fit
statistics, Monte-Carlo sampling 273
MEGA
a program for personal computers, estimation of evolutionary distances 189
Membrane-bound proteins
modelling 527
MetaModel
computer package, modelling response coefficients 295
METREE
minimum evolution trees 409
Microsoft Windows
TREECON package 569
Minimum evolution tree
inferring and testing, METREE 409
Modelling
BUILD, program for modelling experimental data 145
membrane-bound proteins, location prediction 527
nucleic acid structures 427
program for DNA structure generation and analysis 61
steady state flux, tricarboxylic acid cycle and glyoxylate bypass 295
Molecular evolution
neural networks 633
Monte Carlo simulation
multiple alignment 587
MSPcrunch
sequence analysis 301
MSU
sequence analysis, electronic mail servers 413
MULTICOMP
phylogenetic analysis 281
Multiple alignment
protein sequence algorithm 587
simulated annealing, MSASA 419
NAMOT
nucleic acid structures, a graphic tool 427
Neural networks
RBF, MLP, comparison 285
sequence-orientated protein design 633
Nucleic acid sequence
generation of sequences and structural analysis 49
homology search algorithm 319
shortmer, using economical primer sets in rapid genome projects 193
Nucleotide
estimation of evolutionary distances, phylogenetic inference 189
Nucleotide sequence
analysis of clustered repetitive motifs 67
multidimensional dot-matrix 605
recognition, pre-mRNA 597
Numerical integration algorithm
equilibrium state prediction 471
ODEN
DNA, amino acid sequence analysis 11
ODS-BOOTSTRAP
statistics and clone ordering 623
OLGCG
sequence analysis, a graphical user interface 335
Oligonucleotide
frequency distribution 465
sequencing primers, shortmer 193
transcription factor signals 501
Optimal alignment
program deficiency 455
Pairwise alignments
multiple sequence alignment, XALIGN 685
Parallel computing
processing DNA sequences 41
Pdb Motif
protein motifs, PROSITE 545
PDBlib
macromolecular class library 575
Peptides
protein sequence alignment 489
PHD
automatic mail server for protein sequence structure prediction 53
Phenotypic characters
intergrated software for microbial identification 71
Phylogeny
implications of multiple sequence alignment 243
Pre-mRNA
nucleotide sequence recognition 597
Profile search
algorithm for fast block searches 79
multiple sequence alignment PROFILEWEIGHT 19
PROFILEWEIGHT
sequence weighting 19
PROSA
peptide and protein *de novo* design 75
Protein
amino acid residues, prediction of higher structure 163
an algorithm for secondary structure prediction 341
calculation of molecular weight 133
homology search algorithm 319
Protein motifs
protein structure and function, Pdb Motif 545
Protein sequences
analysis and display 121
program to display DNA graphically 179
protein function prediction 171
secondary structure prediction 53
Protein structure
prediction, EXCEL 495
Quantitative trait loci
estimation 513
Quest II
gel analysis, access via the Internet 137
QuickBASIC
program for microbial identification 71
REORDER
computerised restructuring of strain data 359
Restriction enzyme digest
genetic analysis programs 249
Restriction mapping
COSMAP 449
DNA fragment analysis 249

Double Digester program 435
RKC coding
identification, RKCLIST 655
RNA
folding structure analysis 7
program for recognition of higher-order motifs 211
transcription analysis program 13
RNAlign
alignment program 389
RNAMOT
RNA, database search 211
Sawyer's algorithm
detection of gene conversion, MULTICOMP 281
Search algorithm
application to protein relationship identification 453
SEQSEE
a program for analysis and display of protein sequences 121
Sequence alignment
determination utilizing peptides 489
increased accuracy 19
program algorithm, identification of global alignments 227
Sequence analysis
De novo design and engineering 75
electronic mail servers 413
OLGCG, a graphical user interface 335
Sequence comparison
parallelization of computer algorithms 509
Sequence data
database 519
Sequence databases
remote access, Internet 31
Sequence motifs
searching tool, BLAST 457
Sequence similarity
program for improved interpretation 111
protein sequence, presentation 179
Shift algorithm computing
analysis of nonparametric data 213
SIMPLE34
nucleotide sequence analysis 67
Single neurones
software stimulation of antidromic activation 237
SORTEZ
protein and nucleic acid sequence database 369
Spectral analysis
heart rate variability program, HRVUAB 559
SSP
secondary structure prediction 659
Statistics
accurate estimates of enzymatic parameters 273
clone ordering, ODS-BOOTSTRAP 623
DNA fragments, non-linear regression 675
multivariate flow cytometry data 285
nonparametric inference analysis 213
Subclones
nucleotide sequence program, TRACTOR 563
SUPER
automated poll and report, implementation and application 105
simplified user poll and experience report 35
T-tracking
TRACTOR program, nucleotide sequence 563
TopPredII
membrane protein structure prediction 683
TRACTOR
nucleotide sequence program 563
Transcription
nucleic sequence motif searching 13
TREECON
construction of evolutionary trees 569
VISA
visual aid, sequence analysis comparison 537
Visual sequence analysis
multiple amino acid, VISA 537
XALIGN
multiple sequence alignment 685
XTALIGN
improved gene mutation interpretation 361
